1. Introduction

The purpose of this Report is to present the electronic platform (web pages) of the DREAM project. The electronic platform is the most important mean of dissemination, and targets a diversified audience: (1) citizens, (2) the scientific community, (3) customers and stakeholders for exploitation. The platform architecture has been devised to show all the relevant information and outcomes to this variety of people. The architecture and a short description of the pages are presented in this document.

The following domain name has been registered: <http://www.h2020-dream.eu>

The web pages have been published and are now accessible to the public domain. The pages will be updated throughout the project with news and events (private and public) project outcomes, results, publications and presentations that will be produced.

2. Electronic Platform Architecture

The electronic platform has been devised with the tree architecture depicted in Fig. 2.1.

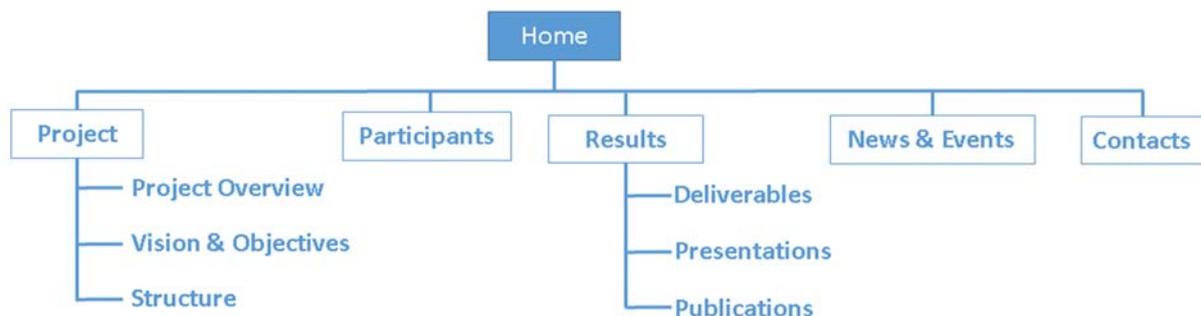

Figure 2.1. Tree of the electronic platform architecture.

The *home* is the page immediately accessible from the web browser at the domain address. From this page, other sections are reachable with buttons well visible in the top bar, or through highlights in the middle of the home page. Information about the project have been grouped in the following sub-categories and described in the rest of this document:

- Project
- Participants
- Results
- News and Events
- Contacts

2.1 Home

The home page is immediately accessible at the domain address. Particular care was paid to the layout and the content of this page since it gives the first impression about the project and should stimulate curiosity and interest in browsing other pages from a diversified audience. Simplicity has been preferred, placing minimal information here. A screenshot of the page is shown in Fig. 2.1.1.
